Precise colour matching
When you're working with colour, precision is vital. Prospray offers a powerful, easy-to-use set of tools that will help you match colour accurately.

Valspar Colour box
Our Valspar Colour Box helps you select an accurate colour match, first time and every time. Offering thousands of colours, expertly organised, it will enable you to find the right colour fast. All formulas are available on Prospray's Colour Retrieval System, Pro-FIT.

TONERS

Prospray can be mixed as a basecoat using a high-solid, normal-solid or low-solid level. The level is adjusted in Pro-FIT. The basecoat system offers excellent coverage and superior blending and uses a 1:1 mixing ratio with thinners or as an option, activate with activators.

OFFERING SOLUTIONS
FOR THE FUTURE

The Spectrophotometer is a quick and precise tool for an exact colour match. The tool measures a colour and links it to an extensive database.

This time-saving colour tool has different languages and is easy to calibrate. Prospray's colour experts conduct ongoing research and add information to the database every day. Weekly updates ensure that the latest information is always at your fingertips.

5-angle Spectrophotmeter

66-365*	Spectrophotometer
64-002	Coarseness Selector
66-366	Spectrophotometer Base station
	Plastic case with a transparent cover that can be opened and closed to protect from falling, dust or dirt. Comes with a cable that connects the Spectro to a PC.

* Valspar Coarseness Selector included

Comprehensive software

Comes with a number of precision algorithms to find the best colour match: Search and Correct and Search and Interpolate. Our comprehensive software improves your efficiency and increases functionality, also note that new algorithms are regularly added specifically for effect colour corrections.

Lens cover

An in-built lens cover has been designed to prevent damage or dust when the unit is not in use.

Small and light

The spectrophotometer is small, while also being light, making it easier to hold and position.

Calibration functionality

For optimum performance, it is important to calibrate the spectrophotometer regularly. The spectrophotometer is intuitive and uses a traffic light colour system to show the calibration status:

• Green – no calibration required for 7 days
• Yellow – calibration is advised, changes after 7 days
• Red – calibration is mandatory.

Calibration can also be performed via Wi-Fi connection.

Five angles

Takes measurements from five angles. The five angle readings improve the accuracy and efficiency of the colour matching algorithms – meaning users will get a closer match, faster. The additional angles also future-proof the spectrophotometer, as we update our database to five angle readings.
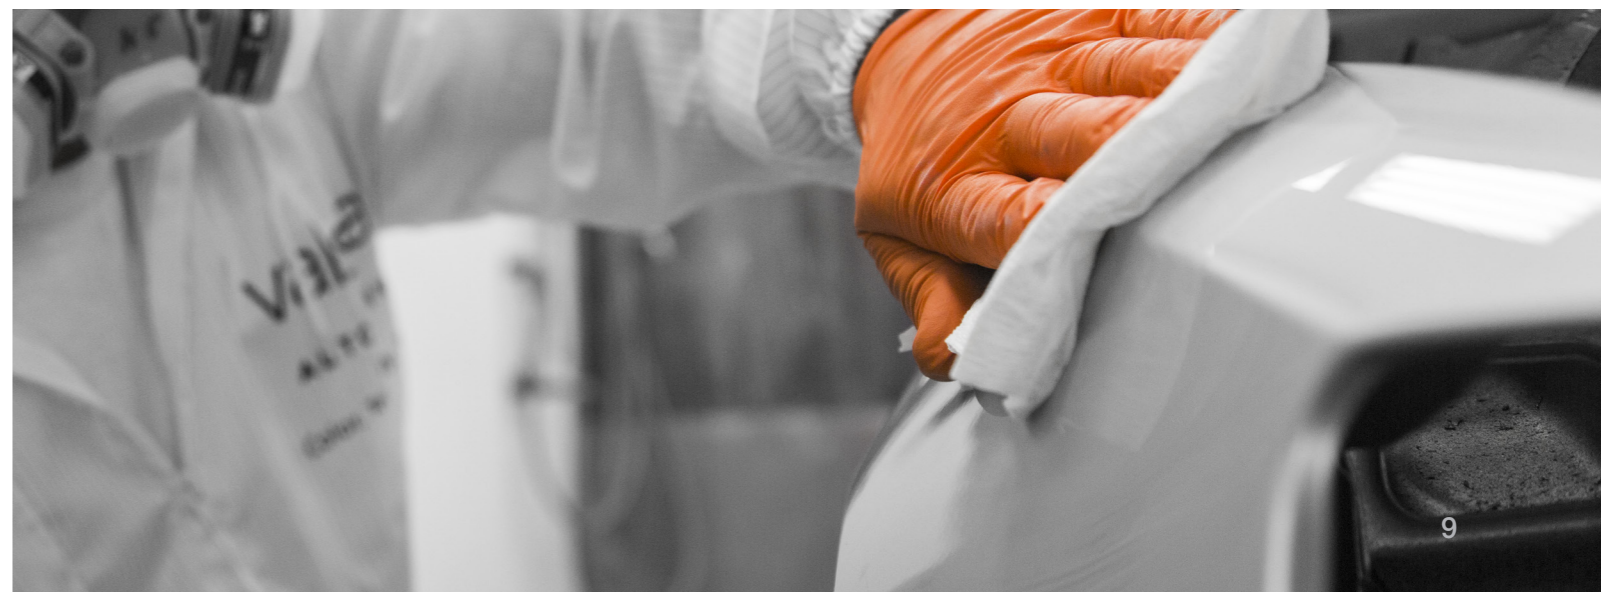

Touch screen and stylus

Working with the unit is very intuitive thanks to the inclusion of a touch screen and stylus, like those available on leading smartphones.

Rechargeable batteries

Crucially, the spectrophotometer uses rechargeable lithium-ion batteries, ensuring that it is always ready to go.

Wi-Fi connection

Wi-Fi functionality means the spectrophotometer is mobile and can be used anywhere in the body shop. Normal operations like searching for readings, conducting measurements and calibrations can be performed without the need to connect the spectrophotometer to a cable or to be near the PC running the Spectrophotometer Client software, ensuring users can continue using the spectrophotometer even on the move.
